plants. As

you can see in the table, Phalaris Tuberosa does not have particularly high DMT levels, but it does have quite a bit of 5*Me-DMT. It appears that the alkaloid content of Phalaris Tuberosa is such Ayahuasca preparation that one dose of DMT also includes a dose of 5-Me-DMT. So Phalaris Tuberosa is actually just as strong as the other plants containing minimal 5-Me-DMT. The DMT in Phalaris Tuberosa should contribute visual hallucinations to the trip.

The bad news for Phalaris Tuberosa is that it contains bufotenine. But even a large dose of Phalaris Tuberosa (100g containing 100mg DMT and 22mg 5-Me-DMT, a full dose of each) contains 5g of 5-OH-DMT, one half the dose given in the study cited in Ott. Most phalaris users report that they ingest or smoke the product. Such an administration route is less sudden and "shocking" than injection. Perhaps this will temper the effects of 5-OH-DMT. Caution should still be used with Phalaris Tuberosa. Phalaris arundinacae and desmanthus illinoesis, containing no 5-OH-DMT, appear to be safer, but lacking in 5-Me*DMT.

The phalaris plants are tall grasses. They grow well in Australia, around the Mediterranean sea, and all over America. They grow in clumps up to 7 feet tall. Desmanthus Illinoisis is also called "Illinois Bundlweed." It's a bush that grows, obviously, in the Illinois area. Psychotria species are the yopo used in South American ayahuasca potions.

Table 1

ALKALOIDS REPORTED AS mg PER 100g RAW DRIED PLANT, AND AS PERCENT OF TOTAL PLANT SOURCE WEIGHT.

+++++

P. Tuberosa:

DMT 100 mg .100%

5-Me-DMT 22 mg .022%

5-OH-DMT 5 mg .005%

P. Tuberosa ('net gossip)

DMT 170 mg .170%

5-Me-DMT 60 mg .060%

P. Arundinacea ('net gossip)

DMT 60 mg .060%

Desmanthus Illinoisis (root, from Ott)

DMT 200 mg .200%

Desmanthus Illinoisis (root bark only, from Ott)

DMT 340 mg .340%

Psychotria species (averaged, from Ott)

DMT 200 mg .200%

+++++

Unfortunately, sheep herders in Australian desired strains of low alkaloid phalaris plants. So now most commercially available phalaris are probably weak. Phalaris can be obtained through mail order herb companies, some of who advertise high alkaloid plants. Because I do not wish to associate these fine suppliers names' with an article on how to prepare a drug, I will not provide names or addresses. Just ask around on the net.

XXXXXXXXXX SHEEP DEATH XXXXXXXXXXXXX

I put this as a separate section to highlight it's significance. Remember, if you try these drugs, you are using something that kills sheep. The toxic syndrome is called "phalaris staggers." It is manifested by apparent dizziness, staggering, aplants. As you can see in the table, Phalaris Tuberosa does not have particularly high DMT levels, but it does have quite a bit of 5*Me-DMT. It appears that the alkaloid content of Phalaris Tuberosa is such that one dose of DMT also includes a dose of 5-Me-DMT.
